INSTALLING GHOSTSCRIPT ON WINDOWS 7

Install Ghostscript

1. Click the following link to get to the support FAQ for installing Ghostscript. http://mile.com/about-us/support/faqs/creating-pdf-reports-faq/

2. Click the link to download Ghostscript for a 32- or 64-bit operating system, depending on your version of Windows 7. (To find this, right-click on your **Computer** icon and click **Properties**. This information is listed under "System type".)

3. Let the download finish and click the **Run** option to run the setup.

4. Click **Setup** and then **Install** to install the program.

Install the Ghostscript Printer

1. Open your Printers and Faxes Control Panel (**Start > Devices and Printers**).

2. Click **Add a Printer**.

3. Choose the option to **Add a Local Printer** attached to this computer and click **Next**.

4. Under "Use an existing port", click **FILE** and click **Next**.

5. Click **Have Disk** and browse to the Ghostscript files. They are located in **C:\Program Files\gs\gsX.XX\lib** (x represents the Ghostscript version number). The file name is **ghostpdf.inf**. Click **OK** and then **Next**.*

6. Name the printer "Sybase DataWindow PS" and DO NOT set it as the default printer. Click **Next**.

7. No need to print a test page – click **No** and then **Next**.

8. Review the info and click **Finish**.

*If you receive a message about the driver being unsafe to install, click **Install Anyway**.
